SMT Reflow Soldering Instructions

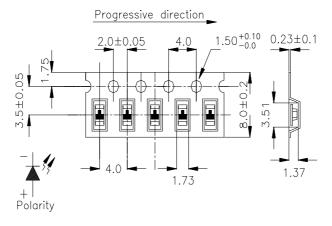

Notes:

- Selles gives no other assurances regarding the ability of to withstand ESD. It is recommended to use a wrist band or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded.
- 2. Reflow soldering should not be done more than two times.
- 3. Do not stress LED when soldering, and do not warp the circuit board after soldering
- 4. While using Iron, Power dissipation of Iron should be smaller than 25W, and temperature should be controllable. The work should be finished within 2 sec under 320℃ for once only.

Recommended Soldering Pad Dimensions

Package Specifications (Units: mm (inches))

Notes:

- 1. The LEDs should be used within a year.
- 2. The LEDs should be kept in $5\sim30^{\circ}$ C and 60% RH for less.
- 3. The LEDs should be used within 24 hours, or else should be kept in 5~30℃ and 30% RH or less. And LEDs should be used within 7 days after opening the package.

Judgment criteria of failure for the reliability

Measuring items	Symbol	Measuring conditions	Judgment criteria for failure
Forward voltage	V _F (V)	IF=20mA	Over U×1.2
Reverse current	$Ir(\mu A)$	V _R =5V	Over U×2
Luminous intensity	Iv(mcd)	IF=20mA	Below S×0.5

Note: 1.U means the upper limit of specified characteristics. S means initial value.

2.Meansurment shall be taken between 2 hours after the test pieces have been returned to normal ambient conditions after completion of each test.
